

SENATOR MINERALS INC

NEWS RELEASE

5 June 2006

TSX-V SYMBOL: SNR

2006-8

“Hill End Project, NSW, Australia – Reward Area Drill Results”

Senator Minerals Inc (the “Company”) has received drill results from the Reward area of the Hill End project from the operator, Sydney-based Hill End Gold Limited.

The recently completed Reward area diamond drilling program was designed to intersect the Hangingwall, Central, and Footwall zones, to establish the continuity of individual high-grade vein sets, and to extend the high grade intersections previously reported, an example being hole HHD22, which returned 0.40 meter at 31.85g/t Au in the Phillipson’s vein set, 0.25 meter at 34.8g/t Au and 0.12 meter at 32.7g/t Au in the Mica vein set, and 0.08m at 220g/t Au in the Amalgamated vein set.

Continuity of the Reward gold mineralization has been confirmed by assays received and interpreted for the latest three diamond drill holes (HHRCD23, HHRCD24, HHD25).

Hole HHRCD23, which is located 40 meters to the south of the high grade intersections in hole HHD22, was completed early after hitting a stope in the Frenchman’s vein set. The hole had intersected a new vein between Rowley’s and Frenchman’s vein sets with 43.8g/tAu over 0.07 meter. Hole HHRCD24 replaced HHRCD23 by drilling deeper on the same section.

Hole HHRCD24 intersected the following vein sets:

- Stevens vein set with five veins over a 9 meter interval including a leader vein assaying 34.90g/tAu over 0.15 meter with numerous grains of visible gold;
- Paxton’s vein set with five veins over a 14 meter interval including a bedding vein assaying 39.60g/tAu over 0.30 meter;
- Mica vein set (including Star of Peace and Middle Workings veins) with eight veins over a 10 meter interval including a bedding vein assaying 8.59g/tAu over 0.14 meter;
- Phillipson’s vein set with four veins over a 4 meter interval including a bedding vein assaying 47.90g/tAu over 0.20 meter.

Hole HHD25, which is located 30 meters north of NRI005, extends the Paxton’s vein set to the north where the Reward mineralization is still open. The hole intersected significant assays in the Mountain Maid, Steven’s, Paxton’s, Mica and Phillipson’s vein sets. Paxton’s contains thirteen mineralized veins over a 10 meter interval with a number of veins containing visible gold and moderate assays.

The Stevens, Paxtons, Mica, and Phillipson’s vein sets have now returned significant gold assays over strike lengths of 380 meters, 285 meters, 265, and 280 meters respectively, with each of these sets having a dip length of approximately 50 meters. The system remains open along strike and at depth.

All zones contain significant mineralization, which is interpreted to be a strike extension of the rich Hawkins Hill workings located approximately 400 meters to the south. These zones and the deeper Footwall Zone have been partially tested in the Reward area. Along strike to the north and south of the Reward area drilled to date, there are high grade intersections in all vein sets, including the Rowleys, Frenchman’s, and Amalgamated.

Results to date demonstrate that gold mineralization in the Hawkins Hill – Reward mine sequence is more extensive and more continuous than anticipated, so the original target area has been expanded along strike and at depth.

The first seventeen holes of the Reward area drill program were reported in the Summary Report prepared by Edward Harrington, PGeo, of Reliance Geological Services. That report is available for viewing on the Senator web site at www.senatorinc.com. The following table summarizes significant results from holes 18 to 25.

HHD = diamond drill HHRC = reverse circulation HHRCD = combination of reverse circulation and diamond drilling

Hole	Location		Dip	Az.	Depth (m)	Drill Intersection (m)			Gold (g/t)	Vein System

+++++

Senator Minerals Inc is a TSX-V-listed junior exploration company with a diverse portfolio of property interests in North America and Australia.

In addition to its earn-in option for a 50% interest in the Hill End gold project in New South Wales, Australia, Senator has 100% lease option interests in five highly prospective Midas-style targets in the Northern Nevada Rifts area, a 100% interest in two prospects in Nevada's Cortez Hills area, and a 100% interest in the Taurus copper-moly deposit in southeastern Alaska.

Senator also has 1% NSR's on the Rosebud gold-silver prospect in northwestern Arizona, and both the Okey and Key high grade copper prospects in northeastern British Columbia.

This News Release was prepared under the supervision of Rick Redfern, VP, Exploration for Senator, a Certified Professional Geologist and Qualified Person (QP), and Edward Harrington, PGeo, an independent professional geologist and QP, on behalf of the SNR Board of Directors, which accepts full responsibility for its contents.

ON BEHALF OF THE BOARD

"Tony Simon"

TONY SIMON, BComm, CA
President
